SUMMARY

B.Tech Electronics and Communication Engineering undergraduate with strong foundations in Data Structures & Algorithms, Object-Oriented Programming, DBMS, and Software Engineering. Experienced in developing full-stack applications using Python, FastAPI, React, and PostgreSQL, with hands-on experience in AI-powered automation. Passionate about building scalable software solutions and solving complex real-world problems.

EDUCATION

VIT Bhopal University 2023–2027
B.Tech Electronics and Communication Engineering **CGPA: 9.55/10**

KDMA International, Kanpur 2022–2023
Class XII (PCM) – **95%**

Gulmohar Public School, Kanpur 2020–2021
Class X – **95.5%**

PROJECTS

Expense Pilot GitHub
React, FastAPI, PostgreSQL, SQLAlchemy, Tailwind CSS, OCR, Groq/OpenAI API, JWT **2026**

- Developed an expense intelligence platform using React, FastAPI, PostgreSQL, & OCR to automate receipt processing & bookkeeping.
- Built **15+ REST APIs** with JWT authentication, managing **1,000+ expense records** through a scalable FastAPI backend.
- Integrated OCR and LLM-based categorization with analytics dashboards, reducing manual effort by approximately **80%**.

Task Management Web Application GitHub
Python, Flask, HTML, CSS, JavaScript, SQLite **2026**

- Programmed a full-stack task management web application using Flask following the MVC architecture.
- Implemented complete CRUD functionality with persistent storage supporting **1,000+ task records** and efficient database operations.
- Built **10+ Flask routes** integrating frontend and backend, reducing manual task tracking effort while providing a seamless user experience.

MCQ Generator using LLM GitHub
Python, LangChain, Groq API, Streamlit **2025**

- Designed an AI-powered MCQ generator capable of creating structured assessments from PDF and text documents.
- Implemented validation logic to generate **50+ MCQs** per document with improved consistency and formatting.
- Designed an interactive Streamlit interface, reducing manual question preparation time by nearly **70%**.

RFID-Based University ID System GitHub
ESP32, Python, SQLite **2025**

- Prototyped an ESP32-based RFID authentication system integrating attendance, library, and cafeteria services.
- Created a Python desktop application with SQLite backend capable of managing **1,000+ student records**.
- Automated attendance reporting and Excel export, boosting operational efficiency by **80%**.

TECHNICAL SKILLS

Programming Languages: Python, Java, C
Web Development: Flask, HTML, CSS, JavaScript, SQLite
Core CS: Data Structures & Algorithms, Object-Oriented Programming, DBMS, Operating Systems, Computer Networks
AI & Coursework: LangChain, LLM Applications, Prompt Engineering, Computer Vision (OpenCV), Streamlit
Embedded Systems: ESP32, Arduino, UART, SPI, I2C, Bluetooth

CERTIFICATIONS

- Introduction to Programming in C – NPTEL
- Introduction to IoT – NPTEL
- VLSI Design and Verification – Ethnus
- Introduction to FPGA Programming
- MATLAB Fundamentals
- Fundamentals of Signal Processing
- Core Signal Processing Techniques
- Bits and Bytes of Computer Networking

LEADERSHIP & EXTRACURRICULAR

- Appointed Floor Representative; coordinated communication between students and administration.
- Represented district in Chess; active participant in Table Tennis and Badminton.
- Organized and officiated college-level Table Tennis tournaments (50+ participants).
